

Per simmetria:

$$4_D = \frac{7 q l^4}{6EI} + \frac{q l^2}{EA}$$

$$\Delta \eta_{AD} = 4_D - 4_A = \frac{14 q l^4}{6EI} + \frac{2 q l^2}{EA} = \frac{7 q l^4}{3EI} + \frac{2 q l^2}{EA}$$

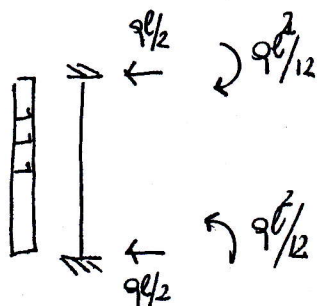

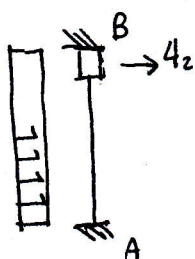

III)

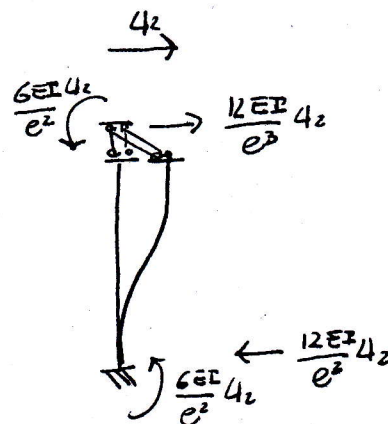

traversi supporti rigidi = solo traslazioni
orizzontali. I plastici dei supporti
indifformabili assai elevati.

Unici spostamenti cinematicamente ammissibili.
