**SEPTEMBER 25th
at 3:00 p.m.**

**Aula Canani, Vecchi Istituti Biologici
Via Fossato di Mortara 64, Ferrara**

There will be a seminar entitled:

“Single-cell assays in microdroplets”

Speaker: Dr. Ing. Tomasz Kaminski

Department of Biochemistry, University of Cambridge

Department of Environmental Microbiology and Biotechnology, University of Warsaw

Host: Prof. Stefano Volinia

Department of Translational Medicine, UNIFE

Single-cell assays in microdroplets

Abstract: Water-in-oil droplets, made and handled in microfluidic devices, provide a new experimental format in which ultra-high-throughput experiments can be conducted faster and with minimal reagent consumption. This seminar will present our novel microfluidic technologies for enzyme engineering, functional screening and transcriptomic profiling of single cells. We have demonstrated that multistep single-cell genomics methods, such as VASA-seq, enable the best-in-class RNA capture efficiency of both non-polyadenylated and polyadenylated transcripts across the entire transcript length. Recently we have applied these novel methods to generate the first large-scale total-RNA-seq atlas profiling mouse gastrulation and early organogenesis.
